

GOODBYE PAIN WITH SHOCKWAVE THERAPY

The world's most clinically proven shockwave therapy device is now at [insert clinic name]!

We're excited to bring the latest non-invasive pain relief technology to [insert clinic name]. Find out how Swiss-Made EMS DolorClast® Shockwave Therapy can benefit you!

Our recently installed EMS DolorClast® Shockwave device means that you can now experience natural, clinically proven pain relief and long-term healing all without the need for surgery, pain medication or injections.

Tackle pain and promote healing fast! The beneficial effects of Shockwave Therapy on pain and mobility are often experienced from the very 1st treatment session and the long-term healing benefits continue after your last treatment. On average only 3- 8 sessions are required.

- NO SURGERY = NO DOWNTIME
- NO INJECTIONS = NO COMPLICATIONS
- NO PAIN MEDICATION = LESS SIDE EFFECTS

Shockwave Therapy is a major advance in effective, safe treatment. We're looking forward to welcoming you to [insert clinic name] and helping you on your road to recovery.

WHAT IS SHOCKWAVE THERAPY?

Shockwave Therapy is an innovative cost-effective therapy that can target specific pain in the bones, joints, muscles, tendons and ligaments. It's a non-invasive and safe treatment that gives significant or total relief of pain in 90% of patients suffering from musculoskeletal disorders.

Shockwaves are high-powered sound waves that can transfer energy from outside the body to inside the body. When you're treated with Shockwave Therapy at [insert clinic name]:

1. Your practitioner will use a hand-held device connected to a machine that turns compressed air into sound waves
2. They'll apply some light pressure and move the device over the area that requires treatment. It takes about 5 minutes to deliver a single treatment
3. Gel is applied to the skin beforehand to help transmit the shockwaves through the skin

One of the big benefits of Shockwave Therapy is that you can heal quickly as shockwaves stimulate the body to heal itself. Shockwaves pass through the body without breaking the skin, unlike an injection which can cause damage to the tissue treated over time.

This makes it an ideal treatment for athletes and from anyone suffering from chronic pain. Experience the same treatment that many Olympians and professional athletes including well known AFL and NRL teams use so they can heal and go back to play quickly.

WHAT CONDITIONS CAN BE TREATED?

The main benefits of Shockwave Therapy are pain relief and restoration of function. The EMS DolorClast® Radial Shockwave has been shown to be an effective treatment modality for 90% of Musculoskeletal disorders including:

- Plantar Fasciitis (heel pain)

- Patella Tendinopathy
- Hamstring Tendinopathy and Tears
- Achilles Tendinopathy
- Calcific Bursitis
- Rotator Cuff Disorders
- Trochanteric Bursitis and Gluteal Tendinopathy
- Bone spurs
- Heel spurs
- Arthritis

An assessment by a professional health care practitioner is always necessary to ensure you're a candidate for Shockwave Therapy.

IS THERE CLINICAL EVIDENCE SUPPORTING THE USE OF SHOCKWAVE THERAPY?

The EMS DolorClast® Radial device used at [insert clinic name] is the most clinically researched Shockwave device. Most of the clinical studies demonstrating the efficacy and safety of Shockwave Therapy have been performed on a DolorClast® device. The results speak for themselves as for over 23 years, more than 100 million patients have been treated with DolorClast® Shockwave Therapy.
