

6 REASONS TO CHOOSE EMS DOLORCLAST® RADIAL SHOCKWAVE

Endorsed by:

Clinically proven, fast, effective treatment for long-term injury healing. If you're looking for a non-invasive solution to help your patients and build your bottom line, here are 6 reasons to invest in EMS DolorClast® Radial Shockwave Therapy:

1 IMPROVED PATIENT OUTCOMES AND INCREASE IN RECALLS AND REFERRALS

Patients experience clinical improvements with tendon pathologies and 90% of other musculoskeletal disorders after just one shock wave treatment. A reduction in pain and increase in range of motion is felt after the first appointment therefore patients are more likely to complete their full treatment plan and recommend shock wave treatment to their friends, family and GP.

2 REDUCE STAFF TURNOVER AND EXTEND YOUR CAREER

Manual therapy can overtime cause wear and strain on clinicians' bodies. EMS DolorClast® Radial Shock wave Therapy provides an easy-to-use handpiece to effectively treat patients and can reach therapeutic penetration depths between 2 – 4cm. Meaning happy staff = happy patients = increase in revenue.

3 ATTRACT AND SEE MORE PATIENTS

Typically, treatment times last for approximately 4 minutes and normally only 3 – 5 appointments are needed to produce effective clinical outcomes. EMS DolorClast® Radial Shockwave Therapy in conjunction with loading and rehabilitation exercises have a far greater benefit than loading exercises and rehabilitation exercises alone.* Treatment times are reduced so you can see and attract more patients as the outcomes are greater.

4 PRODUCE NEW INCOME STREAM

Allied healthcare practitioners are charging between \$30 and \$90 per EMS DolorClast® Radial Shock wave treatment on top of their standard consultations. If you charge \$80 per session and you're seeing 1 patient for 2 sessions per week, that's \$160 per week in revenue which covers your leasing costs. If you treat 4 patients twice a week, that's \$2,560 per month or, \$30,720 per year. Speak to our EMS Clinical Experts and put together your personalised Shock wave Therapy business plan.

5 BE AN INDUSTRY LEADER

EMS DolorClast® Radial Shockwave Therapy has been used to treat athletes in all Olympics since Athens 2004. Since then, most global sporting teams are using EMS DolorClast® Shock wave Therapy including Liverpool FC due to the instant and long term results. Shock wave Therapy is recommended as an ideal therapy for MSK disorders. Be seen as the industry leader with the most clinically proven shock wave device in the world.

6 QUICK AND EASY TO IMPLEMENT

EMS Clinical Experts support you every step of your Shock wave Therapy journey to ensure you're getting the best possible return from your device. The shock wave is quick and easy to implement into your practice. EMS provide you with on-boarding training for your entire team with EMS Swiss-trained practitioners, CPD courses, free webinars, marketing resources, service support, up to date clinical cases and so much more.
